

APPLICATION MIGRATION ASSESSMENT

ANALYSE AND PRIORITISE YOUR APPLICATION PORTFOLIO

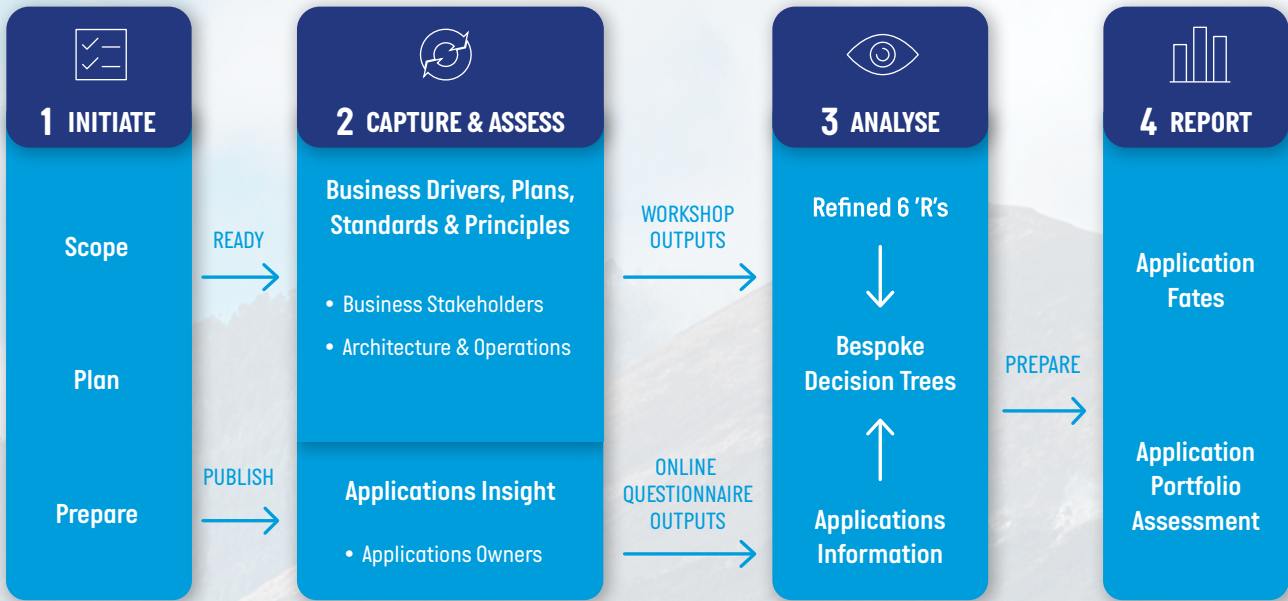

LET'S GO

APPLICATION
MIGRATION

Computacenter's Application Migration Assessment enables customers to analyse and prioritise your application portfolio, usually as part of a cloud adoption programme, with business priorities in mind.

KEY BENEFITS

- Solution is tailored to your business needs.
- Reduce migration complexity through data-driven decision making.
- Unlock opportunities for cost-saving and risk avoidance.
- Confidently accelerate cloud adoption, aligned to a clear strategy.
- Make decisions on a target platform: public cloud, on prem, multi-cloud.

ALIGNING APPLICATION STRATEGY TO YOUR BUSINESS GOALS

At Computacenter, we work with you to understand their business strategy and IT services vision, to prioritise the 6 'R's and eliminate those that don't support your over-arching objectives. We then capture the operational and technical attributes of each application.

Our disposition analysis auto generates a tailored migration decision tree that is defined by the your core operational principles, service delivery factors

and architecture standards. Each application is then analysed by the decision tree. Our approach encompasses both cloud and more traditional on-premise delivery of applications and services.

We create a report detailing the suggested fate for each application, providing you with a business case that reflects transformation estimated costs, migration risks, project timeline and proposed delivery resources.

THE 6 'R'S

Retire

Application will no longer serve a business purpose or there is a planned retirement date agreed.

Retain

Maintain application in its current state as there is no valid business or technological case to change it.

Rehost

Movement from one environment to another with no platform or app changes.

Replatform

Movement from one environment to another with changes to the underpinning technology used to build, deploy and run the app/workload.

Repurchase

Changes through alternative technologies or consumption models to meet business needs.

Rearchitect

The redesign and rearchitecting of the underlying application in order to leverage technology changes.

WHY COMPUTACENTER?

At Computacenter, we know enterprise, we know cloud and we know what it takes to get the public cloud fully in-line with an enterprise's digital strategy to keep your business accelerating in the long term:

- Start with a cost-efficient solution and scale
- Long heritage of data center migrations.
- Delivery at scale
- Vendor independence
- Partner ecosystem
- Global Reach
